

A 10x20 grid heatmap visualization. The color scale ranges from 0.00 (lightest gray) to 0.04 (darkest gray). The highest values are concentrated in a small cluster in the upper-middle part of the grid, specifically around row 3, column 10. The values decrease as they move away from this central cluster, with the lowest values (0.00) appearing in the bottom-left and bottom-right corners.
